the tomb shaped like a horseshoe or the Greek letter, omega. A great deal of popular lore has accumulated around this type of tomb. Okinawans believe that the shape of the tomb symbolises the position of a woman giving birth to a child. This is related to another idea, "returning to the source" (moto ni kaeru in Japanese).

Four different but related meanings seem to be involved in the idea of "returning to the source": (1) that life here is but a momentary experience. One's real and permanent life is in the afterworld. At death one returns to his permanent home. (2) After death a person becomes a god (hotoke-san) in the Buddhist sense. He reaches this state 49 days after death, according to some explanations, though there is much confusion on this point. This godhood is a "return to the source." (3) At death one returns to a state of peace, and (4) one returns to a former state or to a former place. It is with this last meaning that the turtleback tomb is associated in popular lore with "returning to the source."

On death one returns to the womb of nature from which he came. (Similar lore has collected around the Buddhist coffin in which the corpse is put in a position like that of a child in the womb). Whether the popular explanation is the true one is very hard to say. It certainly should not be accepted without critically evaluating the questions which such an explanation raises. Early European and American observers were quick to point out the similarities between those tombs and those of China, though the fact that they were introduced from China does not rule out the symbolic meaning they might have. Many Okinawans regard these tombs as indigenous. But the Okinawan antiquarians, who so love to find symbols in everything, would be loathe to surrender this lore. It is generally agreed that the tombs were introduced from Fukien province in China. Captain Basil Hall was the first western traveller, I think, to notice the similarity between Okinawan and Fukien tombs. M'Leod also mentioned it.

The gable (hafu) type of tomb is very common. There are also small temporary tombs of masonry, more often built of rocks. The tombs of Hinatogawa are of this type. There are also very old tombs, hollowed out of the rock of a hillside. These were rare in the villages. Only one was seen in the dense vegetation and undergrowth at the bottom of a deep ravine in the center of Matsuda. Large tombs hollowed out of hillsides are a commonplace, but the small ones apparently were the tombs of the very poor. Recently a new small tomb is being built by families unwilling to undergo the expense of the larger tombs. Tombs, though appearing to be haphazardly placed on mountains or on rocky hillsides, are on privately owned land.

The tombs may also be classified as to use, that is, whether they are intended for a single or the extended family. In Hanashiro, tombs are of the extended family type, located on land owned by the main family. They are the responsibility of the head of the main family. Branch families may contribute to the purchase price of the land, construction materials, and to maintenance.
